#1 Sprint Backlog

Scientific Programmable Calculator

User Stories

Priority Order

The priority order goes from value 1 to 6 where 1 is the highest priority and 6 the lowest.

ID	Description	Acceptance Criteria	Priority	Story points			
Basic Operations							
A1.	As a user I want to add 2 complex numbers	Given I've saved at least 2 on numbers, when I press the then I want as result the su the last 2 saved numbers	"+" button				
A2.	As a user I want to subtract 2 complex numbers	Given I've saved at least 2 on numbers, when I press the then I want as result the dibetween the last 2 saved n	"-" button, fference	1 1			
A3.	As a user I want to multiply 2 complex numbers	Given I've saved at least 2 on numbers, when I press the then I want as result the probetween the last 2 saved n	"x" button, oduct	1 1			
A4.	As a user I want to divide 2 complex numbers	Given I've saved at least 2 on numbers, when I press the then I want as result the divided between the last 2 saved n	"/" button, vision	1 1			

A5.	As a user I want to make the square root of a complex number	Given there are some complex numbers saved, when I press the "rad" button, then I want as result the square root of the last one saved	1	1		
A6.	As a user I want to invert sign of a complex number	Given there are some complex numbers saved, when I press the "+/-" button, then I want as result the opposite of the last one saved				
A7.	As a user I want to insert a number without his imaginary part if this one is equal to zero in order to execute operations with real numbers	Given I'm a user who want to use real numbers in operations, when I want to insert numbers that have imaginary part equals to zero, then I can insert only the real part		1		
Data Access						
B1.	As a user I want to save entered numbers to use them in next operations	Given I've entered a complex number, when I press the "save" button, then I can memorize the value of this number	2 1 r			
B2.	As a user I want to delete all saved	Given I've saved some numbers, when I	2	1		

BI.	numbers to use them in next operations	when I press the "save" button, then I can memorize the value of this number	2 1
B2.	As a user I want to delete all saved numbers because they might be useless	Given I've saved some numbers, when I press the "clear" button, then I can delete all saved numbers	2 1
B3.	As a user I want to delete the last saved number in case I don't need it	Given I've saved a number, when I press the "del" button, then I can delete just the last number saved	2 1
B4.	As a user I want to duplicate the last saved number	Given I've saved a number, when I press the "dup" button, then I can duplicate the last number saved	2 1
B5.	As a user I want to swap the last two entered numbers to invert their order in the next operation	Given I've saved at least 2 numbers, when I press the "swap" button, then I can invert the order of the last 2 saved numbers	2 2

B6. As a user I want to pick the second last element saved

Given I've saved at least 2 numbers, when I press "csl" (copy second last) button, then I can have access to the second last element

2 2

Sprint Velocity

Estimated velocity for the first sprint:
